Quiz 7

Name: Key

You must show your work to get full credit.

1. Let a, b, c, d integers and r a rational number with $cr + d \neq 0$. Show that $s = \frac{ar + b}{cr + d}$ is also a rational number. *Hint:* Start by assuming that $r = p/q$ for integers p and q and recall that to show s is rational you need to show that of the form $s = \frac{\text{integer}}{\text{integer}}$.

Assume $r = \frac{p}{q}$ with $p, q \in \mathbb{Z}$. Then

$$\begin{aligned} s &= \frac{ar + b}{cr + d} = \frac{a(\frac{p}{q}) + b}{c(\frac{p}{q}) + d} = \frac{a(\frac{p}{q}) + b}{c(\frac{p}{q}) + d} = \left(\frac{ap + bq}{cp + dq} \right) \\ &= \frac{ap + bq}{cp + dq} \end{aligned}$$

As $ap + bq, cp + dq \in \mathbb{Z}$, this shows s is a ratio of integers and thus rational.

2. Let α be a real number. Show that α is irrational if and only if $3\alpha - 2$ is irrational. *Hint:* You are allowed to use the result of Problem 1.
